ACTIVITIES & MESSAGE TO MEMBERS

We are a National Reference Centre (CRN), specializing in **Processing and Installation of Wood and Cork** within the Vocational Education and Training (VET) system, officially designated by the Spanish Government. Acts as a national benchmark for **innovation, experimentation and excellence in VET** related to wood and cork industries. We support teachers' upskilling and continuous professional development in wood sector. Collaborates with the ecosystem of companies, associations, federations, and educational institutions whose aim is to promote and improve employment and vocational training in the woodworking and furniture sector.

As a public center, we operate with a strong mission of service: improving skills, supporting employability, and strengthening the competitiveness and sustainability of the wood-based sector. We aim to benefit from the network by exchanging best practices in training, innovation and technology transfer related to wood-based materials and applications, as well as gaining early insight into emerging trends.

We are delighted to join this dynamic community of organizations committed to innovation, sustainability, skills development and competitiveness in the forest-wood value chain across Europe. As a member, we look forward to **sharing knowledge, learning from one another, and building meaningful collaborations** that connect research, innovation, training and industry needs.
