

# HOLZFORSCHUNG AUSTRIA – AUSTRIAN FOREST PRODUCTS RESEARCH SOCIETY

**Gerhard Grüll**

[g.gruell@holzforschung.at](mailto:g.gruell@holzforschung.at)

As a practice-oriented institute, Holzforschung Austria deals with the entire value chain in the wood sector. Our competence ranges from wood storage in the forest via wood processing all the way to concrete applications such as glued laminated timber, windows, or multi-storey timber construction. Related disciplines such as surface technology, wood protection, bioenergy, cellulose, fittings technology, fasteners and adhesive technology are permanent components of our work as well.

For more than 70 years, Holzforschung Austria has been a reliable partner for all companies in the wood industry. As a not-for-profit research institution, we support both large and small companies in the

development and market launch of innovative products.

We are accredited and notified for all relevant testing and inspection procedures in the field of wood processing, and also recognized for all relevant certification systems in the wood sector. Along with our knowledge of the latest developments, we are therefore the ideal partner in matters of quality assurance and as independent experts. Our experts convey their specialist knowledge to the industry at our industry meetings, information seminars and courses.

We are interested in new research cooperations, and we are available for exchange and networking activities.
