ACTIVITIES & MESSAGE TO MEMBERS

WoodWorks! Cluster (WW!C) is a member-based cluster with 75 members that collaborate on innovation and development within the forest and wood-based value chain. WW!C connect the entire value chain from forestry, wood industries, wood construction & buildings, architects, pulp industries, and new areas for the utilization of wood fiber and on creating value for the raw material. A united industry with shared visions and projects, focused on a common, sustainable future.

WW!C has extensive experience in leading and participating in collaborative innovation projects within industrial wood processing, timber construction and the built environment. The initiative represents a coordinated effort across the value chains to develop, test and disseminate scalable transformation solutions.

WW!C can contribute with expertise in value-chain collaboration, industry engagement, cross-sector coordination, and knowledge dissemination, with a particular focus on scaling and market uptake. WW!C plays an active role in cross-border Nordic collaboration.
